Skills O'Clock: Talk to Your Pipeline – Using AI Assistants for Customisable & Reproducible Bioinformatics with Nextflow

– *Skills O'Clock is a format by fellows, for fellows.* –

Join the next Skills O'Clock session on May 5, 2026, at 14:00 CEST / 13:00 UK time, led by **Bobby Ranjan**, a former Predoctoral Fellow in the Hackett Group.

Nextflow has become the gold standard for reproducible, scalable bioinformatics pipelines, but modifying the source code to suit one's dataset has traditionally still required substantial computational expertise. In this Skills O'Clock session, participants will learn to describe their analysis goals conversationally to adapt Nextflow pipeline code with AI assistance, and develop enough intuition to read, tweak, and troubleshoot what's produced. We'll work through a concrete example and cover practical strategies for prompting effectively in a

bioinformatics context, understanding the structure of Nextflow processes and channels at a conceptual level, and knowing when to trust (and when to question) AI-generated code. By the end, participants will have a working template they can adapt to suit their own data, and the confidence to continue building with AI assistance independently.

No prior coding experience required. Curiosity about your data is enough.

Heidelberg: Seminar Room 1-202

Online: Please use this [link](#) (Meeting ID: 935 1055 6360, Passcode: 650203).

No registration is required for this event.

All information can be found on the [event website](#).

Date: 5 May 2026 | [Add to calendar](#)

Time: 14:00 CET

Location: Heidelberg, Online

EMBL is Europe's life sciences laboratory – an intergovernmental organisation with more than 80 independent research groups covering the spectrum of molecular biology.
